A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable ...

Britain's energy needs could be met entirely by wind and solar, according to a policy brief published today by Oxford's Smith School of ...

However, building a global power system dominated by solar and wind energy presents immense challenges. Here, we demonstrate the potential of a globally interconnected solar-wind system to ...

The UK is already home to the 3 largest operational offshore wind farm projects in the world, but the UK must secure even more to deliver clean ...

Onshore wind and solar, where auction results are due in fortnight, should come in cheaper. But offshore, with its greater generating capacities, is the renewables workhorse.

Scottish Power wants to bring cables onshore from two vast new wind farms in the shallow waters of Doggerland, in the North Sea.

Google's service, offered free of charge, instantly translates words, phrases, and web pages between English and over 100 other languages.

This guide provides you with a front-row seat to that transformation, allowing you to explore an interactive wind farm map, ...

Britain will fast-track the connection of dozens of clean energy projects, including wind and solar power, to its electricity grid and will speed up the construction of new energy...
