The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and ...

Despite the changing market and policy conditions that the solar industry has faced this year, solar will remain the dominant power source added to the grid in the next five years.

In 2024, between 554 GWdc and 602 GWdc of PV were added globally, bringing the cumulative installed capacity to 2.2 TWdc. China continued to dominate the global market, ...

Each presentation focuses on global and U.S. supply and demand, module and system price, investment trends and business models, and updates ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax ...

Growing demand for renewables-based clean electricity coupled with government policies, tax rebates, and incentives to install solar panels is expected to drive ...

Join us at Solar Power World as we cover the world of solar news on technology, development and installation on a daily basis.

Solar accounted for 81% of all new renewable energy capacity added worldwide. While remaining a modest contributor to overall electricity generation for now, solar's share rose to 7% in ...

When solar energy, together with wind energy, forms a high share of power generation in a grid, any excess

Current status of photovoltaic grid panel industry

swings in power frequency can lead to ...
