---

In recent years, energy storage has gained momentum because of the need to integrate a higher quantum of renewable energy (RE) in the grid to meet India's climate goals.

Three initiatives, regulations or policies related to decentralised energy storage have been updated or introduced by the relevant agencies at the national or state level.

Government support and competitive tariffs are driving rapid deployment, positioning energy storage as a cornerstone for renewable integration and grid reliability.

Aggregator model: A third party aggregators collates the distributed ESS units to participate in demand response bids in the electricity market. The Aggregators gets paid the DR incentives which is ...

Developed a detailed Energy Storage Roadmap for India for deployment of different ESS technologies with timelines under various scenarios of VRE and EV penetrations

Between 2022 and May 2025, India auctioned approximately 12.8GWh of battery energy storage system (BESS) capacity for both hybrid and ...

The report, Strategic Pathways for Energy Storage in India Through 2032, tackles these questions. With its sharp analysis and data-driven approach, it maps out practical, affordable ways to roll out storage, ...

In this context, the dramatic decline in energy storage costs--marked by a nearly 90% reduction in global storage prices over the last decade and recent energy storage auctions in India reflecting a ...

Appropriate Commissions may notify suitable regulations to encourage the deployment of distributed energy storage systems such as electric vehicle batteries, rooftop solar with integrated battery ...

# Distributed energy storage operations in India

India has set a target to achieve 50% cumulative installed capacity from non-fossil fuel-based energy resources by 2030 and has pledged to reduce ...
