---

Adding battery storage to a power grid can encourage markets to favor coal over natural gas, University of Michigan researchers concluded in a new study. While both of those power ...

In AEO2025, we project CO<sub>2</sub> capture at electric power and industrial facilities will increase through the 2030s, primarily due to increased tax credit values. Captured emissions peak at ...

In this report, the Congressional Budget Office examines the status, federal support, and future potential of carbon capture and storage (CCS)--a process that ...

Low Carbon Solutions is helping to lower emissions by providing solutions to our industrial and commercial customers in growing markets for carbon capture and storage, hydrogen ...

But here's the kicker - did you know these giant batteries could also mint "green gold"? Welcome to the world of carbon assets in energy storage projects, where megawatts meet market value in the fight ...

Commercial Liftoff (Carbon Management Liftoff) report. OCED's carbon management portfolio includes both direct air carbon capture (DAC), which removes CO<sub>2</sub> directly from ambient air, and point source ...

Projects under development will increase CO<sub>2</sub> capture capacity to almost 10 times the current operating capacity. Despite this momentum, only ...

This study shows that mixing risky projects (like forests that can burn) with low-risk ones (like underground storage) in carefully designed portfolios can support climate goals.

In this paper, we develop a portfolio approach to manage carbon storage project risks, with the potential to select CDR options available today, while maintaining the ability to stabilize ...

# Energy storage projects can increase carbon assets

Utility-scale energy storage is now rapidly evolving and includes new technologies, new energy storage applications, and projections for exponential growth in storage deployment. The energy storage ...
