Solar Energy Information. Read the latest news and techniques for efficient solar photovoltaic power, new solar energy systems and more.

Year-end wrap-up Following 35% growth, solar has passed hydro on US grid Coal makes a bit of a comeback, if only by accident.

Is solar power going to take over the world? The past few years have seen a frankly astounding acceleration in the rate of its deployment, with ...

We find that, due to technological trajectories set in motion by past policy, a global irreversible solar tipping point may have passed where solar energy gradually comes to dominate ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

After all, electricity demand in the US is going through the roof and solar is the most abundant, accessible, and economical domestic energy resource available today. The US Energy ...

That expected growth is down from the record 37 gigawatts of solar power capacity that was added in 2024 and may dwindle further as some analysts believe that solar power may face ...

Solar power became the most affordable energy source between 2021 and 2025, with costs dropping below coal and natural gas in most regions.

But, globally, the use of renewable energy is on the rise -- and several countries are shifting to solar faster than anyone thought possible.

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to
