-----

The paper emphasises the environmental and social benefits of a multi-objective microgrid management strategy within the emerging transactive energy systems paradigm.

This study proposes an improved multi-objective particle swarm optimization (IMOPSO) algorithm for coordinated control and optimizing ...

This paper introduces a multi-stage constraint-handling multi-objective optimization method tailored for resilient microgrid energy ...

This paper proposes a scenario-based multi-objective optimization model for grid-connected microgrid considering the cost and carbon emissions to realize the optimization of economy-environmental ...

This study introduces a novel multi-objective optimization framework for microgrids, integrating hybrid renewable energy sources (PV, WT, FC, MT, DG) and ESS to minimize costs, ...

These results demonstrate how the optimization framework balances multiple objectives, ensuring an efficient and cost-effective energy ...

In this study, a multi-objective optimization model based on MINLP was presented for daily energy management in microgrids. A multi-objective function was proposed that includes ...

This study designs a multi-objective planning optimization problem to determine the optimal sizes of a multi-energy microgrid comprising PV, wind, battery storage, thermal storage, ...

**Multi-Objective Energy Management Optimization on Grid-Integrated Microgrid Using Multi-Agent Deep Reinforcement Learning for Enhanced System Stability in HRES and BESS**

In this regard, a multi-objective optimization scheduling model for microgrids in grid-connected mode is

# Microgrid Multi-Objective

proposed, which comprehensively considers the operational costs and environmental protection ...
