This study provides an overview of the agent concept and multi-agent systems, as well as reviews of recent research studies on multi-agent systems" application in microgrid ...

In this paper, the implementation of a MultiAgent System (MAS) for the control of a set of small power producing units, which could be part of a MicroGrid, are presented. The use of MAS ...

Agent-based smart microgrid simulation built with Python Mesa. Models solar, wind, battery, consumers, and mobile maintenance agents while visualizing the Butterfly Effect.

It is expected that this work will provide an insight into the design and development of a multi-agent system, as well as serving as a basis for practical implementation of an agent-based ...

This article presents an efficient and easily implementable real-time energy management and control system based on multi-agent systems for hybrid Low-Voltage Micro ...

Microgrid systems are built to integrate a generation mix of solar and wind renewable energy resources that are generally intermittent in nature. This paper presents a novel decentralized ...

This study proposes a distributed control system using a multiagent system (MAS) to regulate the DC bus voltage in a grid-connected microgrid through a co-simulation ...

By just defining the microgrid topology, the platform deployed a full agent system that managed the grid with optimised energy plans. Furthermore, a graphical interface allowed to monitor the ...

This paper presents a new approach for detecting faults in multiple protection zones utilizing a Multi-Agent System (MAS) technique and state observer. The proposed ...
