Large-scale expansion of renewable energy can play a critical role in meeting the world's growing energy demands and in the fight against climate change. However, even "clean" energy sources can ...

The Nature Conservancy is working to make the transition to clean, renewable energy across the globe.

Can the clean-energy revolution save us from climate catastrophe? Seven charts show the remarkable growth in renewable power and the ...

Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. The most widely ...

Coordination between the competent authorities should highlight and deliver nature restoration opportunities wherever possible in renewable energy planning and deployment, including in RAAs, ...

Uncover the latest and most impactful research in Renewable Energy. Explore pioneering discoveries, insightful ideas and new methods from leading researchers in the field.

Renewable energy production, derived from sunlight, wind, water and geothermal activity, reduces greenhouse gases, ...

Renewable energy is energy from sources that are naturally replenishing but flow-limited; renewable resources are virtually inexhaustible, but they are limited by the availability of the resources.

Without fundamentally altering how humans generate and utilise energy, there is no effective strategy to safeguard the environment. The motivation behind this ...

The renewable energy transition also offers opportunities to reset our relationship between energy production and nature by increasing the efficiency of how we use energy and decreasing its ...
