Energy efficiency and renewable energy are the main pillars of sustainability and environmental compatibility. This study presents an overview of sustainable and green cellular base ...

His research work dealt with measuring and modeling of electromagnetic fields around base stations for mobile communications related to the health effects of the exposure to ...

This paper provides a quick overview of the BS management techniques that were recently proposed for cellular networks. In addition, an outlook on real implementation aspects, including current ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

Recent reports from GSM Association (GSMA) and ABI Research highlighted the initiatives that telecom operators are taking to tackle climate ...

saving in wireless base station is particularly important for network operator. In this article, we first provide an introduction of green wireless communications with the focus on the power efficiency of ...

What is a green base station test system? Environmentally-Friendly, Disaster-Resistant Green Base Station Test Systems, which are radio base stations with environmentally friendly, disaster ...

This paper presents a control theoretical approach to study the base station sleeping strategy optimization issues with CoMP communications.

As the new radio (NR) based 5G network is configured to transmit signal blocks for every 20 ms, the proposed algorithm implements withstanding capacity of on or off based energy switching, ...

Ottawa Communications Green Base Station Management Measures

Execution Strategy: The integrated energy-saving strategy is sent to the network management system to perform the energy-saving operations on 5G base station, such as deep sleep, carrier shutdown, ...
