Solar panels are composed of photovoltaic (PV) cells that convert sunlight to electricity. When these panels enter landfills, valuable resources go ...

The 2026 NEC brings new labeling requirements for solar installations. This solar energy news helps installers, developers, and ...

A visual guide to the specific labels and plaques required for solar PV systems by NEC Article 690, including placement and wording for all required warnings.

In a previous article, I laid out the case -- with no shortage of scientific citations -- that leaching from solar panels isn't some hypothetical NIMBY fear.

Now, both regulators and panel manufacturers are realizing that they don't have the capacity to handle what comes next.

The NEC690 Building Inspector's Guide is a set of reference materials developed for Building Inspectors and AHJ Officials as it relates to Article 690, of the National Electrical Code (NEC 2014) for ...

Summary. Solar energy is a rapidly growing market, which should be good news for the environment. Unfortunately there's a catch.

Unsubstantiated claims that fuel growing public concern over the toxicity of photovoltaic modules and their waste are slowing their deployment.

Whether you have solar panels on your roof, you see them in the community, or you design and install them for a living, it's important to understand how solar panels safeguard us, our children, and future ...
