Premier Resource Management (Bakersfield, CA), in partnership with the National Renewable Energy Laboratory, will develop a 100-kWe demonstration power plant with more than 12 ...

A molten salt battery stores thermal energy generated by solar power plants during the day, enabling electricity production at night when ...

Discover how converting sunlight into stored heat using molten salt allows solar towers to generate a continuous, reliable supply of renewable electricity.

The TES system in the next generation CSP plants works with new TES materials at higher temperatures (> 565 °C) compared to that with the commercial nitrate salt mixtures. This ...

A new generation of molten salts has been developed by Yara and proven to reduce the cost of solar power generated using Concentrated Solar Power (CSP) technology. This new generation of solar ...

Improved molten salt technology is increasing the efficiency and storage capacity of solar power plants while reducing solar thermal energy costs. Molten salt is ...

When electricity is needed, the hot salt is used to boil water and produce high-temperature, high-pressure steam, which turns turbines that ...

Completed the TES system modeling and two novel changes were recommended (1) use of molten salt as a HTF through the solar trough field, and (2) use the salt to not only create steam but also to ...

Known as the Facility to Alleviate Salt Technology Risks, or FASTR, the system's inaugural run evaluated the viability of using a mixture of ...
