Discover data on Electricity: Supply, Transformation and Consumption in Slovenia. Explore expert forecasts and historical data on economic indicators across 195+ countries.

Roughly one-third of Slovenia's electricity comes from hydroelectric sources, one-third from thermal sources, and one-third from nuclear power (with non-hydro renewables constituting two ...

Track real-time and historical electricity data worldwide -- see production mix, CO2 emissions, prices, cross-border exports, and much more.

Elektro Ljubljana operates and manages the largest energy distribution network in Slovenia, and is also the owner of the electric power infrastructure.

It is the only power transmission system operator in the country. ELES operates the network of 400 kV, 220 kV and 110 kV transmission lines with a total length of 2,587 km (1,607 mi).

Operators must adopt development plans for the system every two years. A development plan must define main infrastructure for electricity transmission and distribution which must be constructed or ...
