Solar panels and wind turbines now generate power more cheaply than coal and natural gas plants, making them a clear choice in the push to ...

Here, a conventional brick has been transformed into an energy storage device that can power an LED light. Whether humans were erecting ...

Spain took a new step towards sustainable construction. It bets on buildings that perform photosynthesis to generate energy. This is because they ...

The brick comprises a glass structure with integrated photovoltaic cells that convert solar radiation into electrical energy. The photovoltaic cells are integrated into the glass structure, enabling ...

Integrated into walls and coupled with solar panels, the devices could provide emergency power and lighting in case of power outages or ...

A British company has designed a new kind of glass brick that can create electricity using solar power. Solar power uses the energy of the Sun to ...

On this week's show, Staff Writer Robert F. Service talks with host Sarah Crespi about manipulating microbes to make them produce building materials like bricks--and walls that can take ...

Canadian solar technology manufacturer, Mitrex, has launched brick-like solar panels that can transform regular walls into power generators. ...

They can lower energy costs and improve the energy efficiency of buildings by storing excess solar energy during the day and releasing it at night. This can also reduce the dependence ...
