(Bloomberg) -- China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory. The nation ...

In 2024, over 30,000 MW of solar capacity came online, which is a 30% increase in operating solar capacity. An additional 34,000 MW are under preparation, testing, or construction and projected to ...

In Q2 2025, the industry installed about 7.5 gigawatts-direct current (GWdc) of new solar capacity, a 24 percent drop compared to Q2 2024. Across ...

Solar, wind, and battery storage are projected to add 62% more generating capacity in 2026 than in 2025, assuring that...

The world is set to add 649 gigawatts of solar power capacity in 2026, down slightly from 2025, with the decline driven by policy shifts in China and the US that have cooled demand growth.

The International Renewable Energy Agency (IRENA) reports that, between 2010 and 2023, the global weighted average levelized cost of energy of ...

In the third quarter of 2025, about 20% of planned US solar power capacity experienced delays--down from 25% a year earlier, signaling ...

In the third quarter of 2025, solar projects representing about 20% of planned capacity reported a delay, a decrease from 25% in the same period in 2024, based on data compiled from ...

Most data suggest decreases in CAPEX in the first half of 2024, but energy pricing across market segments varied because of other factors. In Q3 2024, module prices rose 1% but stayed near ...

In Q2 2025, the utility-scale solar sector installed 5.7 GW dc of capacity, marking a 28% year-over-year

Solar power generation capacity declines

decline. Solar installations in Q2 2025 slowed compared to previous quarters, ...
