The quarterly series provides insights on state regulatory and legislative discussions and actions on grid modernization, utility business model ...

The microgrid technology is an alternative energy generation and distribution system that can provide backup power during emergencies to increase resilience while reducing total energy costs.

One of these solutions is microgrids that can disconnect from the grid and offer grid resilience during an outage. While this technology is still finding its footing in the industry, states ...

Increased Reliability and Resilience Economic Opportunity Clean Energy Development Enhanced Cybersecurity Powering Remote Communities By incorporating cybersecurity into the design process from the earliest stages, microgrids can be used to bolster cyber-defenses for customers. This can be particularly relevant for military installations, government facilities and businesses. See more on ncsI energychangemakers [PDF] STATE SCORECARD 2024 - energychangemakers a meaningful solution for the operational needs of the state electric grid and the fundamental architecture of the grid supports robust contributions from distributed energy resources and microgrids.

Up to 24 stationary microgrids will be installed across six Helene-affected counties, with two mobile "Beehive" microgrid hubs serving the entire state -- one in Western North Carolina and ...

When the main electric grid loses power, the microgrid goes into island mode (i.e., operates independently of the main electric grid) and serves its own customers with the generation and other ...

The three-tiered, 300-kW/386-kWh grid-tied system is capable of providing grid stabilization, microgrid support, and on-command power response. The three tiers of batteries are ...

A new report by Think Microgrid says most states are doing an insufficient job at deploying microgrids despite developing microgrid roadmaps.
