-----

Tables 2.1-2.4 show the fuel makeup of generation capacity under construction, permitted, with an application pending, or proposed. Solar comprises the largest share of all four development categories.

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well ...

Electricity generation from solar, measured in terawatt-hours.

OverviewPotentialTechnologiesDevelopment and deploymentEconomicsGrid integrationEnvironmental effectsPoliticsSolar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power. Solar panels use the photovoltaic effect to convert light into an electric current. Concentrated solar power systems use lenses or mirrors and solar tracking systems to focus a large area of sunlight to a hot spot, often to drive a steam turbine.

Following 35% growth, solar has passed hydro on US grid Coal makes a bit of a comeback, if only by accident.

Estimated small scale solar photovoltaic generation and small scale solar photovoltaic capacity are based on data from Form EIA-861M, Form EIA-861 and from estimation methods ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

The following table ranks the best and worst states for solar energy production (shown in thousand megawatt-hours) in October and November, number 1 represents the best state for solar ...

## Table about solar power generation

A comparison of the solar power status among countries and territories has been provided, considering their concentrated solar power and PV installed capacities for each continent.
